

GK DROP TRAILER

Combining Technology & Tradition Since 1976

Fast and Efficiently Drops Planted Pots from Trailer to Ground

GK Machine's self-unloading tipping style trailer is designed for container plants to be easily deposited to the ground in just minutes.

The Drop Trailer allows a full load of containerized plants to fill the bed of the trailer and then be transported to another location. By simply dropping the back end of the trailer, the containers full of plants easily off-load on to the ground in just seconds.

First built in 1998 in cooperation with Bailey's Nursery, and several improvements to the design over the years, this drop trailer has sped up the planting and transporting processes at many local nurseries.

- The trailer uses existing orbiter motor from tractor to run chains
- 2,500 lbs. empty trailer weight
- Minimum HP to unload is 25-30 HP, depending on nursery terrain
- 64" tallest point at full-tilt of trailer

Capacity: The trailer is 8' x 16' and can be load to the following capacities:

Size / Containers:

- #1 = 480
- #2 = 240
- #3 = 180
- #5 = 144
- #7 = 84
