

# Contract Manufacturing

*Combining Technology & Traditional Since 1976*

The farmer-built Grady Twin Pak Baler punches out small bales with big baler efficiency,  
Produces 2-3 times more bales than the fastest small baler on the market!

## Grady Twin Pak Baler

- Reaches nearly 85 percent of the tonnage per hour a big baler can produce
- Single big-baler pickup and plunger presses each flake, cuts it in half and triple tied
- Bales drop in an offset pattern for ease of pickup by stackers
- The adjustable width can produce 14, 15 or 16 by 21-inch bales
- The computer system tracks flake count, moisture and hydraulic temperature, and bale count for field and lifetime
- With room for 30 rolls of twine, the Twin Pack can produce 11,000 bales without reloading
